Experience

Junior Web Developer (Contract) | **eJam** Santa Ana, CA | Apr 2026 - May 2026

- Shipped over 20 landing, checkout, and upsell pages for performance-marketing A/B tests across two consumer brands, wired into CRM and ad-platform tracking.
- Diagnosed a Git webhook deploy that left production stuck on stale commits after asset-heavy pushes, designing a catch-up cron job and a media-to-CDN rule that went to production.

Software Development Engineer | **Amazon Luna** Irvine, CA | Mar 2024 - Aug 2024

- Refactored the controller metrics pipeline to classify unidentified devices, raising labeled coverage 30% and shipping a dashboard non-technical stakeholders used for support decisions.
- Isolated a black-screen stream failure on Edge to an upstream hardware-acceleration experiment, then shipped an Edge-specific workaround that restored baseline functionality.
- Reviewed intern pull requests across multiple cycles, holding them to the TypeScript client's null-safety and typing conventions before merge.

Software Development Engineer Intern | **Amazon Luna** Irvine, CA | Jun 2022 - Sep 2022

- Owned a TypeScript and Swift volume control feature from design through acceptance testing to production.
- Instrumented the volume control with OpenSearch telemetry to track per-game audio patterns, feeding decisions on default levels and whether to keep the feature.
- Wrote the design document for the volume control, reconciling competing PM and UX proposals into a technical design and acceptance criteria two teams peer-reviewed.

Projects

HSREndgameDB | *Next.js, React, PostgreSQL* | hsrendgamedb.info Jul 2024 - Present

Searchable, filterable index of curated gameplay walkthrough videos, serving over 2,000 monthly visitors

- Cut manual entry per post 60% with a Python OCR pipeline that extracts team compositions from gameplay video, fuzzy-matching misread names against game metadata.
- Served 2x the monthly traffic on only 45% more database compute by caching PostgreSQL reads behind hourly revalidation.
- Wrote PostgreSQL aggregation queries that turn over 230 walkthroughs into per-character usage statistics.
- Built a Python and Node test suite covering request-path validation, pagination clamping, and feed ranking, enforced by a pre-commit hook.

Technical Skills

Languages: TypeScript, JavaScript, Python, SQL, HTML/CSS

Frameworks: React, Next.js, Tailwind CSS

Tools: PostgreSQL, Git, Jest, Pytest, Postman, Sentry, Vercel

Practices: Agile/Scrum, code review, regression testing

Education

University of California, Irvine Irvine, CA | Sep 2019 - Jun 2023

Bachelor of Science, Computer Science - GPA: 3.5

- Specialization in Information: coursework in information retrieval and database management.
