EXPERIENCE

Amazon.com

Mar 2024 - Sep 2024

Software Development Engineer - Amazon Luna

Irvine, CA

- Refactored game controller metrics pipeline to categorize previously untracked third-party controllers, increasing labeled metric coverage by 30% and surfacing data in OpenSearch for non-technical stakeholders.
- Monitored application health and tracked recurring bugs and regressions in Sentry to support ongoing triage and resolution efforts.
- Triageed and resolved compatibility issues on unsupported client platforms in TypeScript, prioritizing fixes that preserved baseline gameplay functionality for affected users.

Amazon.com

Jun 2022 - Sep 2022

Software Development Engineer Intern - Amazon Luna

Irvine, CA

- Designed and implemented a cross-platform volume adjustment feature for browser and macOS clients in TypeScript and Swift.
- Validated feature behavior across client platforms using structured endpoint testing and request simulation through Postman.
- Authored a formal requirements document, peer-reviewed by cross-functional stakeholders, to define project scope, requirements, and implementation plan.

PROJECTS

Punchbowl

2025 - Present

Technical Lead & Project Manager

- Led a cross-functional team of engineers and designers to build a skill development mobile app in React Native and TypeScript.
- Designed backend architecture in Firebase with an emphasis on scalability, achieving up to 50% cost reduction at scale through architectural improvements.

HSREndgameDB

2024 - Present

Full Stack Developer

- Built a full-stack web app enabling players to upload, filter, and browse gameplay videos for challenge content in Honkai: Star Rail.
- Designed a mobile-first UI to support usability across both mobile and desktop browser contexts, reflecting the game's cross-platform player base.
- Implemented a PostgreSQL backend to support user-generated content storage, retrieval, and archival of time-limited challenge data.

SteamLens

2024 - 2025

Full Stack Developer

- Built a Chrome Extension to aggregate game data from ProtonDB, IGDB, and Steam to inform purchasing decisions.
- Developed and integrated REST API endpoints using Express.js to fulfill search query requests from the TypeScript with React front-end.
- Built an ETL script in Python to fetch, normalize, and cache the full Steam game library as structured JSON, including alternate name generation and roman numeral standardization to improve search matching accuracy.

EDUCATION

Bachelor of Science, Computer Science

Sep 2019 - Jun 2023

University of California, Irvine

Irvine, CA

- 3.5 GPA
- Completed a specialization in Information with coursework in information retrieval, database management, and machine learning.

SKILLS

Programming Languages: TypeScript | JavaScript | HTML | CSS | Python | Java | Swift

Frameworks: React.js | React Native | Express.js | Next.js | Angular | Tailwind

Tools & Testing: Jest | Pytest | Postman | Vercel | Git | Jira | Sentry | OpenSearch | Elasticsearch

Databases: PostgreSQL | MySQL | NoSQL
