Experience

eJam | *Junior Web Developer (Contract)* Santa Ana, CA | Apr 2026 – May 2026

- Shipped over 20 landing, checkout, and upsell pages for performance-marketing A/B tests across two consumer brands, wired into CRM and ad-platform tracking.
- Traced production deploys stuck on stale commits to a Git webhook sync that fell behind on asset-heavy pushes, then designed the catch-up cron job and media-to-CDN rule the team deployed.

Amazon Luna | *Software Development Engineer* Irvine, CA | Mar 2024 – Aug 2024

- Refactored the controller metrics pipeline to classify unidentified devices, labeling 30% more devices by model and shipping a dashboard non-technical stakeholders used for support decisions.
- Isolated a black-screen stream failure to a hardware-acceleration test in Microsoft Edge, then shipped a client workaround to re-enable gameplay.
- Reviewed an intern's pull requests through several revision rounds, holding them to the TypeScript client's null-safety and typing conventions before merge.

Amazon Luna | *Software Development Engineer Intern* Irvine, CA | Jun 2022 – Sep 2022

- Owned a TypeScript and Swift volume control feature from design through acceptance testing to production.
- Instrumented the volume control with OpenSearch telemetry to track per-game audio patterns, feeding decisions on default levels and whether to keep the feature.
- Wrote the design document for the volume control, reconciling competing PM and UX proposals into a technical design and acceptance criteria two teams peer-reviewed.

Projects

HSREndgameDB | *Next.js, React, PostgreSQL, Python* | hsrendgamedb.info Jul 2024 – Present

Searchable, filterable index of curated gameplay walkthrough videos, serving over 2,000 monthly visitors

- Cut per-video manual entry 60% with Python OCR that reads lineups and fuzzy-matches misread names.
- Cut Neon serverless Postgres awake time from about 90% of each day to about 60% by tracing wakeups to short Next.js cache windows and lengthening them.
- Wrote PostgreSQL aggregation queries that turn over 230 walkthroughs into per-character usage statistics.
- Added GitHub Actions CI that lints, builds, and runs a Python and Node test suite on pull requests, covering request-path validation, pagination clamping, and feed ranking.

Technical Skills

Languages: TypeScript, JavaScript, Python, SQL, HTML/CSS
Frameworks: React, Next.js, Tailwind CSS
Tools: PostgreSQL, Git, Jest, Pytest, Postman, Sentry
Cloud & CI/CD: AWS (Lambda, S3, EventBridge), GitHub Actions, Vercel

Education

University of California, Irvine Irvine, CA | Sep 2019 – Jun 2023

Bachelor of Science, Computer Science, GPA: 3.5
